

Apply now for large-scale sequencing support

SciLifeLab welcomes applications for the second call of the Swedish Genomes and Biodiversity Programs. The projects focus on two areas: human whole genome sequencing to study the genetic basis of disease, and biodiversity.

SciLifeLab has launched two national programs based on massively parallel DNA sequencing: the Swedish Genomes and Biodiversity Programs.

A first call for the programs has been completed with 21 approved projects and we now welcome applications for a second call.

Granted projects receive free access to the sequencing infrastructure at our platform National Genomics Infrastructure (NGI) and significant funding for sequencing reagents.

Application deadline is April 15th, 2015
