

Campus Solna Group Leader Information Survey

Dear Colleagues,

All research and infrastructure group leaders are asked to complete the on-line Campus Solna Group Leader Information Survey that can be found [here](#). The deadline for completing the survey is November 28, 2022.

Background and Aims: The Campus Solna Committee (CSC) is responsible for developing the research and infrastructure activities at SciLifeLab Campus Solna. A strategic challenge is the full occupancy of the Alpha and Gamma buildings. This has several consequences. Current space limitations negatively impact the ability of existing groups to expand, hamper the development of new national infrastructure units and limit the ability to recruit new groups. To facilitate planning and to productively explore alternatives to expansion, e.g., into the Beta building, updated information regarding existing research and infrastructure groups is needed.

The survey is intended to provide up-to-date information regarding SciLifeLab group leaders at Campus Solna. This will help Campus Solna leadership to understand the needs for local research infrastructures and to obtain insight into how the research environment can be better synchronized and integrated with the national infrastructures. The ambition is to improve the interface between research projects and infrastructure facilities and to increase the possibilities of technology development.

An important aspect of the survey is that you are asked to provide an assessment of your “fit” at Campus Solna and how you and your group contribute to the Campus Solna research/infrastructure environment. Note that this survey is not an evaluation, but rather an attempt to understand how each group leader thinks about how their research/infrastructure activities are coupled to being located at Campus Solna.

Finally, please be aware that: 1) SciLifeLab group leaders at all sites will be asked to update their Group Leader Pages with updates carried out annually to ensure that web-based information remains current; 2) the Campus Solna specific information is intended to facilitate rational planning of research and infrastructure activities at Campus Solna with the goal of enhancing synergism; and 3) the information obtained may impact space allocations, but importantly provide valuable input for planning potential expansion of SciLifeLab Campus Solna.

Complete the Web-Based [Campus Solna Group Leader Survey](#) by Monday, November 28, 2022.

Please feel free to contact your university Scientific Director or me if you have any questions.

Sincerely yours,

Per O. Ljungdahl
Director SciLifeLab Campus Solna
